

SOUTH AUSTRALIA.

AGRICULTURAL

AND

LIVE STOCK STATISTICS

FOR THE YEAR ENDING

MARCH 31ST, 1873;

WITH

PREFATORY REPORT.

PRESENTED TO BOTH HOUSES OF PARLIAMENT BY HIS EXCELLENCY'S COMMAND.

ADELAIDE:

BY AUTHORITY: W. C. COX, GOVERNMENT PRINTER, NORTH-TERRACE.

1873.

REPORT
TO
THE HONORABLE SIR HENRY AYERS, K.C.M.G., M.L.C.,
CHIEF SECRETARY,
&c., &c., &c.

Chief Secretary's Office, Adelaide, 16th June, 1873.

Sir—

I have the honor to submit, for the information of His Excellency the Governor, the following Report upon the Agricultural and Live Stock Statistics for the season ended 31st March last.

The rapidity with which agricultural settlement extends into more distant portions of the Province, under the operation of the new Land Acts, renders the duty of collecting Agricultural Returns more onerous and difficult every year; and the farmers being so much more widely distributed on their larger holdings than in the earlier-settled districts, more time is necessarily occupied in obtaining the required information. In frequent instances farmers were absent from home, selecting land in the new areas, or in actual removal to their fresh selections. By the display of much zeal and intelligence on the part of the collectors generally, I was, however, enabled to publish, on the 10th April, reliable returns of the wheat harvest just gathered, and which had been eagerly looked for, as displacing conjectural estimates—the interests involved being of greater magnitude than had existed on any previous occasion.

OCCUPATION.

The total area of South Australia, exclusive of that portion designated the Northern Territory, is computed to be 383,328 square miles, or 245,329,920 acres. Of this vast territory only about one-fourth has been turned to useful account. Twenty-five Counties, containing 39,287 square miles, or 25,143,680 acres, have been proclaimed, embracing the principal agricultural and pastoral settlements situate within an easy distance of the capital or a shipping port. The Pastoral Districts at present occupied, exterior to the boundaries of the Counties, are held under the Waste Lands Regulations for pasturage only, and contain about seventy thousand square miles, leaving two hundred and seventy thousand square miles still open for settlement. The greater part of this unoccupied territory lies to the North, through which a line of communication has been opened by the construction of the Trans-Continental Telegraph, and the establishment of telegraph stations, adjacent to which cattle runs are already being formed, the route across the Continent being now travelled with comparative ease. There can be little doubt that the explorations now being made on either side of the telegraph line will result in the discovery of large tracts of valuable pastoral country in addition to that already known, of which 6,324 square miles have been taken up under the Pastoral Regulations.

During the year 1872 a very large quantity of land was alienated from the Crown, making the total area at the close of December to be 5,037,970 acres; of which 4,317,102 have

have been purchased for cash, and 720,868 acres under the new system of deferred payments, compulsory cultivation, and improvement. The alienated land averages twenty-six acres for each individual of the population, or 112 acres for each male adult. Nearly three-fifths, or 2,842,751 acres, is in the occupation of the holders of the fee-simple. The area alienated during the twelve months was 413,945 acres; of which 114,788 acres were sold for cash, and 299,157 acres taken up under the credit clauses. Sales of country land by auction *for cash* are suspended for a time.

I append a diagram showing, for a number of years, the area of land alienated, and the quantity under cultivation, revealing at a glance what progress has been made in the settlement of the country. For instance, it shows that fifteen years ago, a population of 110,000 possessed 17 acres of freehold land per head, of which two were tilled; at the present time, with 192,000 people, we own 26 acres per head, of which six are cultivated. Or taking the last five years, in which the new land system has been brought into operation, it will be found that the holdings have increased from 21 acres to 26 acres per head, and the area cultivated from $4\frac{1}{2}$ acres to 6 acres. Erroneous conclusions, however, may be drawn from these figures, unless it be borne in mind that in this interval the addition (16,000) to the population has been actually *one-third less* than the recorded natural increase (23,000) from the excess of births over deaths. During this period Government immigration has been suspended, and there has been no recruiting of the man-power lost, the full extent of which the above figures fail to show, inasmuch as the departures have been chiefly adult males.

The enclosure of leased lands for sheep pasturage continuing to be largely carried on, and selectors of agricultural lands under the system of deferred payments being required by law to fence their holdings, a very large increase appears in the area of enclosed land; no less than 13,021,440 acres being returned as against 10,070,367 acres the year before.

CULTIVATION.

Following a season of comparative failure, so far as the wheat crop was concerned, it is satisfactory to find so large an increase appearing in the extent of land under cultivation, as showing that a period of disaster has not diminished the confidence of the agriculturist in securing a proportionate return for his labor under ordinary circumstances. During the past season no less than 120,190 acres were added to the breadth of land under tillage, an increase of twelve per cent., making a total area of 1,164,846 acres. There are over six acres of land under crop for each individual of the population, twenty-six acres for each adult male, and fifty-six acres for each person returned at the Census as engaged on farms. These figures conclusively show that agricultural operations in South Australia must be attended with exceptional facilities, when such a result can be attained by the employment of so little labor, a state of things, I believe, unparalleled.

One out of every four and a-half acres of purchased land is under cultivation, the remaining portion being devoted chiefly to sheep pasture.

Two-thirds of the tilled ground were under wheat—about the same proportion as in previous years. This fact has naturally caused much comment upon what is termed slovenly farming, when speaking of South Australian agriculture; and there is no doubt the low average yield for the whole Colony chiefly proceeds from the fact that large areas have been cropped for many years successively, without any replenishment of the soil. It must, however, be borne in mind that the climate, and the greater part of the soil, is peculiarly suited to the growth of wheat—the grain in ordinary seasons being unsurpassed in quality; that the putting in, and gathering of this crop by mechanical aid is accomplished in a most economical manner; and that the produce is removable at once from the field to the stores or place of shipment. The convertibility of the commodity at any moment, evidenced in its securing the highest prices ruling in the English grain market, is an element of security not attaching to other descriptions of farm produce.

The total area of wheat reaped was 759,811 acres, as compared with 692,508 acres, showing an increase of 67,303 acres, or nearly ten per cent.

The total quantity of wheat gathered was 8,735,912 bushels, or an average of eleven and a-half bushels to the acre over the whole Colony. This return is slightly below the average of ordinary seasons, and was not equal to the promise given by the luxuriant growth and appearance of the wheat shortly before harvest. In the new Areas the
average

average reached 17 to 19 bushels per acre, whilst some of the older lands produced under 11 bushels. It is confidently asserted that, in many parts of the Colony where labor was particularly scarce, from two to three bushels an acre at least were lost from inability of farmers to employ their reaping-machines within reasonable time of the grain ripening. Flights of locusts again appeared, but late in the season, and did on the whole only trifling damage to the wheat. The rainfall during the season was very favorable. Between April and October, 17·32 inches fell, as compared with 14·97 inches during the same period in the previous year; whilst, at the most critical period, in the months of May, June, and July, 11·7 inches fell as against 8·8 inches in the same months of the preceding season.

Taking forty bushels of wheat to the ton, the gross produce of the crop would amount to 218,398 tons, which, at an average value of only ten pounds per ton, would realize to the community of 192,000 souls the sum of £2,183,980, or equal to fifty pounds for each adult male, or one hundred and ten pounds for each person engaged on farms.

Subjoined is a statement showing the total area of land under cultivation, the acreage under wheat, the gross produce of the harvest, and the average yield per acre for each season since 1858-9:—

Season.	Acres cultivated.	Acres under wheat.	Produce, Wheat.	Average per Acre
			Bushels.	Bush. lbs.
1858-9	264,462	188,703	2,109,544	11 11
1859-60	361,884	218,216	2,103,411	9 38
1860-1	428,816	273,672	3,576,593	13 4
1861-2	486,667	310,636	3,410,756	10 59
1862-3	494,511	320,160	3,841,824	12 0
1863-4	555,968	335,758	4,691,919	14 0
1864-5	587,775	390,836	4,252,949	11 0
1865-6	660,569	410,608	3,587,800	8 44
1866-7	739,714	457,628	6,561,451	14 20
1867-8	810,734	550,456	2,579,894	4 40
1868-9	808,234	533,035	5,173,970	9 42
1869-70	850,576	532,135	3,052,320	5 45
1870-1	959,006	604,761	6,961,164	11 30
1871-2	1,044,656	692,508	3,967,069	5 44
1872-3	1,164,846	759,811	8,735,912	11 30

The quantity of land returned as in fallow, was 234,241 acres as against 201,713 acres, showing an increase of 32,528 acres. About one-fourth of the above is situated in the northern counties, being new land ploughed for this year's crop.

Considerably more hay was grown than in the previous season, 115,704 acres wheat and oats being mown as compared with 97,812 acres, or 17,892 acres additional. The yield was also more abundant, being twenty-four hundredweight to the acre instead of twenty hundredweight; making the total quantity 140,123 tons as compared with 98,266 tons, or 41,957 tons more than last season. This supply, however, is deficient if compared with the produce of 1870-71, when 140,316 acres were cut, yielding 197,419 tons, or 57,296 tons more than the late crop. The comparatively high price which horse fodder has attained shows that the consumption, partly export, is exceeding the supply, and that there can be but little stock to fall back upon in case of a dry season. It would prove very advantageous and economical could a year's supply of hay always be kept as a reserve on our farms.

Barley and oats continue to decline in favor, only one-half of the quantity grown two seasons ago now being returned. As compared with last year, the former shows 12,608 acres, or 4,617 acres less; and the latter, 2,206 acres, or 1,380 acres decrease. The barley crop yielded 180,442 bushels, or at the rate of 14 bushels 16 pounds to the acre; and the oats, 36,152 bushels, or 16 bushels 16 pounds per acre. This retrogression in the cultivation of these cereals is to be regretted, and results most probably from the additional labor necessary for harvesting these descriptions of grain not being available. These crops might with great advantage be more generally grown in the hilly and southern districts.

On the other hand, the culture of field peas increases yearly, and is represented to have a restorative effect upon old wheat lands. The yield appears to be less fluctuating, averaging for several seasons between thirteen and fourteen bushels to the acre. Mention of this crop was first made in the returns of 1865-6, in which season 969 acres were cultivated. The acreage now given is 5,154, producing a total yield of 68,786 bushels.

Potato

Potato planting has but slightly increased, there being only 137 acres more than last year. The total acreage dug was 3,293, producing 10,808 tons, being an average of three and a-half tons to the acre. About one-fourth of this quantity was grown in the South-Eastern District—a portion of the Colony possessing soil and climate peculiarly suited for the growth of this tuber. It is to be hoped that exertions will be made to increase the production in that locality, so that we may no longer continue dependent on foreign supplies for one-half of our requirements of this article of daily consumption.

Flax culture progresses more rapidly, and is apparently receiving much attention in several districts suitable for its growth. This crop was first separately mentioned in the returns in 1871, when 186 acres were under cultivation. The area now shown is 427 acres, being 205 acres more than was grown last year. Flax mills are being established in several localities, experience is being gained in the mode of cultivation best suited to our position, and considerable liberality has been displayed in distributing seed among those farmers desirous of entering upon its culture. There is every prospect of flax growing becoming an established industry, the importance of which cannot be over-estimated.

Permanent artificial grasses, lucerne, and wheat, barley, &c., cut green for fodder, show considerable increases in the area cultivated, being together 17,954 acres as against 10,675 acres last year, or over two-thirds additional. It is satisfactory to note that more attention is being given to the growth of permanent grasses and lucerne, for as yet practically nothing has been done in this direction by farmers or graziers in the hills, although over seven thousand head of fat cattle are annually imported from the Darling to supply the Adelaide market.

Orchards and gardens cover an area of 7,251 acres, or 633 more than last year, whilst the extent of the vineyards is 5,424 acres, or 31 acres less. The quantity of wine made was 657,604 gallons, or 194,711 gallons less than in the preceding season.

LIVE STOCK.

The returns under this head are more satisfactory than last year—in all the items a steady, if not important, increase being shown.

Horses are returned as numbering 82,215 as against 78,125, or an addition of 4,090, and being exclusive of those in towns and villages.

Horned cattle are represented as 151,662 compared with 143,463, showing an increase of 8,199. During the year 7,367 head of fat cattle were brought from New South Wales and Queensland, or 1,367 more than in the previous twelve months. Whether viewed in respect to population or extent of pastoral country, the number of great cattle is seriously disproportionate, and demands grave attention. Compared with the neighboring Colonies, South Australia labors under great disadvantage in the deficiency of large cattle. Ten years ago they numbered over a quarter of a million, and were exported in numbers; now nearly all our butchers' meat is imported, and store cattle are difficult to obtain.

The number of sheep given in the returns is 4,900,687 as against 4,412,055, being an addition of 488,632. Of these 3,384,080 are depastured within the boundaries of counties as compared with 2,887,861 last year, and 1,516,607 in the pastoral districts as against 1,524,194. The increase altogether amounts to eleven per cent., and in view of the high price of wool during the period and the number taken by the meat-preserving and boiling-down establishments, may be considered highly satisfactory.

I have the honor to be, Sir,

Your obedient servant,

J. BOOTHBY, Government Statist.

South Australia.
